Cumulative arrival vs fraction of time free (3D, 1000 molecules per walker, t_max 100 000 s, 1 s dwell, 1000 receptors, first passage) (target ring 1)

Each curve levels off at that condition's capture fraction, not at 1: escapes and molecules still searching at t_max never arrive. A curve that plateaus below 0.20 has no t_20.
