Cumulative arrival vs bound dwell (3D, 1000 molecules per walker, t_max 100 000 s; 500 000 s for 278 s and 1000 s; 5% free, 1000 receptors) (target ring 2)

Each curve levels off at that condition's capture fraction, not at 1: escapes and molecules still searching at t_max never arrive. A curve that plateaus below 0.20 has no t_20.
