Cumulative arrival vs capture efficiency 1/N, 50% free (pseudo-FGF) (3D, 1000 molecules per walker, t_max 100 000 s) (target ring 4)

Each curve levels off at that condition's capture fraction, not at 1: escapes and molecules still searching at t_max never arrive. A curve that plateaus below 0.20 has no t_20.
